Print this page (or just tick the boxes on screen) and work through it as you go. When everything is ticked you can run a purchase order end to end on your own and explain which two accounts every step moved.

1. SAP GUI 8.10 basic operation

- □ You can select a connection in SAP Logon and log on: client 110, user MMUSER01, language ZH
- □ You can point to the five areas of the main screen: title bar / menu bar (system info at the right end) / toolbar (command field) / work area / status bar
- □ You can distinguish the five command field variants MM03, /nMM03, /n, /oMM03 and /nex and say what each one does
- □ You know the difference between Enter (check) and Ctrl+S / ✓ (save), and can say what happens to unsaved input after Enter
- □ You use Tab to move between fields, F4 for the value list and F1 for a field's technical information (table name / parameter ID)
- □ You can read the three status bar message types — green ✓ saved / yellow ! warning / red ✕ error — and say what to do next in each case
- □ You have set LANG / WRK / BUKRS in SU3 and know it only changes your own defaults

2. Master data (getting the inputs ready)

- □ MM03 finds R-1001: description, ROH, PC and standard price 720.00 USD are all there
- □ R-1001 has all five views (Basic Data 1 / Purchasing / MRP 1 / Plant · Storage 1 / Accounting 1)
- □ In BP, 100123 is visible under purchasing organization 1710 with reconciliation account 160000 and payment terms 0001
- □ ME11 record 5300000123: net price 720.00, price unit 1, delivery time 5 days
- □ You can say which message appears when a given view or level is missing
- □ MM04 shows the change documents for the material you just created (who, when, which field)

3. Procure to pay (the main line)

- □ ME51N created requisition 10000001: R-1001 / 300 PC / delivery 2026-11-20 / plant 1710
- □ ME21N created order 4500000123 from the requisition: quantity 300, net price 720.00, net value 216,000.00 USD
- □ You can explain why stock does not change when the PO is saved
- □ MIGO goods receipt 101 posted: material document 4900000001, accounting document 5100000001
- □ MMBE shows R-1001 / 1710 / 0001 with 300 PC of unrestricted stock
- □ MIRO posted invoice 5105600001: amount 216,000.00, tax code V0, no variance
- □ F-53 paid successfully and the invoice for vendor 100123 is cleared
- □ The Purchase Order History in ME23N shows all four entries (created / received / invoiced / paid)

4. Goods receipt without PO and GR/IR

- □ MIGO 501 received 30 PC of R-1002: stock 20 → 50, amount 5,400.00, GR/IR unchanged
- □ MB1B 311 moved 50 PC of R-1001 from 0001 to 0002: total still 300, no accounting document
- □ MB1B 261 issued 20 PC to production order 1000234: stock down, consumption account up
- □ MIRO deliberately invoiced 500.00 too much (0.23%): posted, but the invoice is blocked
- □ Only after MRBR release can F-53 pay (payment before release is stopped)
- □ MB5S totals 0.00 USD, and you can point at a line and say whether it is "received not invoiced" or "invoiced not received"
- □ With all four switches on, MB01 with 101 and no PO receives 50 PC: the status bar shows both the material document and the automatically created PO
- □ ME23N opens the generated PO with a net value of 9,000.00 USD (50 × 180.00) and the received quantity posted back
- □ Switch off Automatic purchase order on the material and receive again on purpose: the system reports "Please enter purchase order" instead of quietly creating one

- [ ] MIRO invoice 217,200.00 (+0.56 %) inside the PP tolerance: it posts, with 1,200.00 on the price variance account
- [ ] MIRO invoice 226,800.00 (+5 %) beyond tolerance: M8083 is reported, the invoice is saved as blocked and reaches payables after MRBR release
- [ ] After removing GR-based IV in ME12 a new PO can be invoiced in MIRO without a receipt; a later MIGO receipt brings MB5S back to zero
- [ ] You can explain why goods dated this month cannot be received after MMPV has rolled over, and why both the M and S rows must be open in OB52
- [ ] MD04 shows a net requirement of 120 PC, and running MRP creates a requisition with source MRP
- [ ] You can explain the accounting difference between the three receipts 501 / 101 / 122

5. Environment checks before you touch a real system

Check	Where to look	Pass criterion
Company code / purchasing organization / plant exist and are assigned	SPRO + SE16N (T001K, T001W)	The plant has a standard purchasing organization and a PO can be created
Number range for the material type (internal or external)	MMNR	R-1001 is accepted, or you leave the number blank and let the system assign it
Valuation classes mapped in OBYC	OBYC (BSX/WRX/PRD/GBB)	Goods receipt posts without M8 147
Invoice tolerances configured	OMR6 (company code level)	BD/DQ/PP have values; variances are blocked or stopped as expected
Vendor reconciliation account and payment terms	BP company code level / XK02	Invoice posting does not report an account determination failure
GL period and material period	OB52 / MMPV / MMRV	The current month is open and the material period is not behind
User authorisations	SU53 / roles	MM01/ME21N/MIGO/MIRO/F-53 are all accessible
Printing and output (optional)	ME23N output / print	PO, goods receipt slip and invoice list can be printed

6. Practice record sheet (handwritten or paste screenshots)

Item	Record
Date / system / client	
Company code / purchasing organization / plant	1710 / 1710 / 1710 (0001 main warehouse, 0002 line-side store)
Material number / description / material type	R-1001 / Steel Bracket / ROH
Vendor number / name	100123 / Palo Alto Components Inc.
Info record number / net price / price unit	5300000123 / 720.00 / 1
Requisition number / quantity	10000001 / 300 PC
Purchase order number / net value	4500000123 / 216,000.00 USD
Material document / accounting document (goods receipt)	4900000001 / 5100000001
Invoice document / accounting document	5105600001 / 5100000002
Payment accounting document	5100000003
Goods receipt without PO: material document / generated PO	4900000002 / 4500000124 (50 PC × 180.00 = 9,000.00)
Errors hit + how you solved them	
Self-test score	/ 24

7. The six places people get stuck (check against this)

Sticking point	Symptom	Fix
Material cannot be selected in the PO	R-1001 returns no match	Purchasing or plant view missing → extend with MM01
No net price appears	The PO reports "No net price could be determined"	Create the info record in ME11 and check purchasing organization 1710
Goods receipt will not post	M8 147 / account determination failure	Valuation class 3000 does not match the OBYC setup — ask FI or a consultant

Invoice is rejected	M8083 price too high / quantity variance	Match the amount to the receipt, or handle the variance by tolerance and release in MRBR
Payment will not run	"Blocked invoices exist" / "No open items"	MRBR to release; FBL1N for open items and confirm the vendor number
Goods receipt without PO errors	"Please enter purchase order" / "No source found"	Work through the four switches (OMJJ / MM02 / BP / source list requirement) plus ME01 one by one

Printing

This page is laid out for A4 portrait: use the browser's Print → Save as PDF to get a paper checklist; tick boxes print as □ so you can fill them in by hand.
