Four tables to keep open while you work. T-codes can be clicked to copy; the error table is organised as status bar message → root cause → first transaction to check; the glossary lines up the English / Chinese / Japanese interfaces (log on to the same system in another language and every field name changes).

1. Full T-code table (everything used in this course)

T-code	Purpose	Notes
`MM01`	Create material master	Initial screen → select views → tabbed entry → save
`MM02`	Change material master	Only the selected views change; save when done
`MM03`	Display material master	Verify what you created; read-only
`MM04`	Display material change documents	See who changed which field and when
`MM60`	Material list report	Filter by material type / plant for bulk checks
`BP`	Business partner (vendor / customer)	The S/4HANA entry point, replaces XK01
`XK01`	Create vendor (legacy)	Still available in older releases; the UI has moved to BP
`ME11`	Create purchasing info record	Net price / price unit / delivery time — the PO price source
`ME12`	Change purchasing info record	Includes the GR-based IV indicator
`ME13`	Display purchasing info record	Check prices and history
`ME51N`	Create purchase requisition	Internal demand, no accounting document
`ME52N`	Change purchase requisition	Quantity and dates; check status first if already converted

`ME53N`	Display purchase requisition	Status: not processed / converted
`ME57`	Assign and process requisitions	Convert requisitions to orders in bulk — faster than by hand
`ME21N`	Create purchase order	Can reference a requisition, contract or RFQ
`ME22N`	Change purchase order	Fields lock once goods are received or invoiced
`ME23N`	Display purchase order	Includes the Purchase Order History tab — first choice for status
`ME28 / ME29N`	Release purchase order	Used when a release strategy is configured
`MIGO`	Goods receipt / return / other receipt	Single entry point, movement types 101/122/501/561
`MB01`	Goods receipt against order (legacy)	Old transaction; MIGO is its successor
`MB1A`	Goods issue (legacy)	Issues such as 261/201, often used in batch scripts
`MB1B`	Transfer posting (legacy)	311/301/309
`MB1C`	Other goods receipt (legacy)	501/561
`MB51`	Material document list	All goods movements by material / movement type / period
`MB5S`	GR/IR balance list	Clearing account balances — a month-end must
`MB52 / MMBE`	Stock list / stock overview	MMBE shows one material across storage locations
`MI01 / MI04 / MI07`	Count document / enter count / post differences	The physical inventory trio
`MR11`	GR/IR reclassification	Clean up long-outstanding accruals
`MD01 / MD02`	MRP plant-wide / single material	Creates purchase requisitions or planned orders
`MD04`	Stock/requirements list	Demand, stock and net requirement at a glance

`MIRO`	Enter invoice	Three-way match; variances handled by tolerance
`MIR4`	Display invoice document	Net, tax, block status and the accounting lines
`MIR7`	Park invoice	Enter now, approve later — good for central invoicing
`ME01`	Maintain source list	Allowed vendors per material + plant; goods receipt without PO relies on it to find a source
`OMJJ`	Maintain movement types (customising)	Where the Automatic purchase order indicator for 101 lives
`OKP1`	Period lock (controlling)	Locks plan / actual periods per controlling area
`MRBR`	Release blocked invoices	Where MIRO variances are released
`MR8M`	Reverse invoice	Only after reversal can you return goods or re-invoice
`F-53`	Manual payment	Lists open items; saving clears them
`F110`	Automatic payment program	Four steps: parameters → proposal → review → run
`FB03`	Display accounting document	Debit/credit, accounts, amounts
`FBL1N`	Vendor line items	Open and cleared items
`SU3`	Personal settings	Default language LANG, plant WRK, company code BUKRS
`SU53`	Authorisation check	Shows which object is missing after an authorisation error
`OB52`	GL posting periods	Open and close periods
`MMPV / MMRV`	Material periods	Advance one month at a time, never skip
`OMR6`	Invoice tolerances	The BD/DQ/PP/VP tolerance keys
`OBYC`	Automatic account determination	Transaction keys BSX/WRX/PRD/GBB and friends

`SE16N`	Table browse	Look directly at MARA/MARC/MARD/MBEW/TVKO and others

2. Error lookup (search by the sentence you see)

Status bar message	Root cause	First transaction / action
Material XXX not maintained in plant XXXX	The material has client-level data only, no plant view	MM01 to extend the plant view
Vendor XXX not maintained in purchasing organization XXXX	The purchasing-organization level is missing in BP	Add the Purchasing tab in BP or XK02
No net price could be determined: purchasing info record XXX / XXX does not exist	ME11 was skipped or the purchasing organization does not match	Create it in ME11 and check organisation 1710
Entry error: valuation class XXXX not defined (M8 147)	OBYC has no inventory account for that valuation class	OBYC plus valuation class / account mapping (OBYC, OMWB)
Goods receipt quantity exceeds allowed tolerance	Receipt > still to be delivered × 1.1	ME23N for the open quantity; change the quantity or receive in parts
Price too high (exceeds tolerance limit 1.000 %) — M8083	Invoice amount exceeds the order net value by more than 1%	Check the invoice; adjust OMR6 or the amount
Purchase order XXX has no goods receipt, cannot be invoiced	Goods receipt was skipped	MIGO first; or switch off GR-based IV (ME12)
This purchase order has already been invoiced in full	Duplicate invoicing	MIR4 to see the existing invoice; MR8M to reverse and re-enter
No open items to clear	Wrong vendor, or the invoice is blocked	FBL1N for open items; MRBR to release

Blocked invoices exist, release them in MRBR first	A variance invoice was flagged as blocked	MRBR, release one by one
Posting period 2026/11 is not open	The GL period is closed	OB52 to check/open the period (MMPV for material periods)
Insufficient stock: available 0 PC	The issuing location is empty or the wrong one was chosen	MMBE for actual locations; change the issuing location
Material document XXXXXXX already reversed	Reversal posted twice	MB51 to verify the document status
User is not authorised to execute transaction XXXX	Missing role / authorisation object	SU53 for the object, then ask Basis
External number assignment not allowed for material type ROH	The number range is set to internal	Leave the material number blank, or change the range (MMNR)
Please enter purchase order (101 receipt without PO)	One of the four automatic-creation switches is missing (movement type / material / vendor / source list requirement)	OMJJ, MM02 purchasing view, BP control data, IMG source list requirement
No valid source found / no available source	No source list entry, or the source list requirement is not active at plant level	ME01 / ME03 for the source; IMG source list requirement
No items to be invoiced (MIRO with a PO)	GR-based IV is ticked on the PO but nothing has been received	MIGO first; or remove the tick in ME12/ME22N
Material period 11/2026 is not open	MMPV has not been advanced to this period, or the document date falls in a closed period	MMRV / MMPV to advance; check the document date

3. Trilingual glossary (match the screens when you switch language)

English term	中文	日本語

Material master	物料主数据	品目マスタ
Material type	物料类型	品目タイプ
Base unit of measure	基本计量单位	基本単位
Plant	工厂	プラント
Storage location	库存地点	保管場所
Purchasing organization	采购组织	購買組織
Purchasing group	采购组	購買グループ
Purchasing info record	采购信息记录	購買情報レコード
Purchase requisition	采购申请	購買依頼
Purchase order	采购订单	購買発注
Goods receipt	收货	入庫
Invoice verification	发票校验	請求書照合
Movement type	移动类型	移動タイプ
Material document	物料凭证	品目伝票
Accounting document	会计凭证	会計伝票
Valuation class	评估类	評価クラス
Price control	价格控制	価格管理
Standard price	标准价格	標準価格

GR/IR clearing	暂估应计（GR/IR）	GR/IR 仮勘定
Accounts payable	应付账款	買掛金
Payment terms	付款条件	支払条件
Net price	净价	正味価格
Tolerance	容差	許容範囲
Blocked invoice	冻结发票	ブロック請求書
Stock overview	库存总览	在庫概要
Net requirement	净需求	正味所要量

4. Field value quick reference

Value	Meaning
`Material type ROH / HALB / FERT`	Raw material / semi-finished / finished good; decides which views are available and the default accounts
`Price control S / V`	Standard price / moving average; with S the difference goes to a price variance account, with V the unit price is recalculated on every receipt
`MRP type PD / ND / VB`	Demand-driven planning / not planned / manual reorder point
`Lot size EX / FX / HB`	Exactly the net requirement / fixed lot size / top up to maximum
`Movement type 101 / 122 / 501 / 561`	Goods receipt against order / return to vendor / receipt without PO / initial stock load

`Movement type 311 / 301 / 261 / 201`	Storage location transfer / plant transfer / production issue / cost center issue
`Document type NB / FO / UB`	Standard order / framework order / stock transport order
`Tolerance keys BD / DQ / PP / VP`	Small difference / quantity deviation / price change / moving average variance
`Payment terms 0001`	Immediate payment (used here); real systems commonly use 0002 = 14 days 2% discount or Z030 = 30 days net
`Valuation class 3000`	Raw materials; maps to inventory account 140000 in OBYC

5. Self-test, 24 questions (click an answer for an instant score)

Q1. After a purchase order is saved, what happens to stock and to the books?

- Stock increases and a GR/IR accrual is raised
- Nothing at all; the books move only at goods receipt
- Payables are created immediately

Q2. Goods receipt of 300 PC at a net price of 720.00 — what is the value of the receipt document?

- 216,000.00
- 720.00
- 300.00

Q3. The net price field in the PO is grey (read-only). Where does the price come from?

- The purchasing info record ME11

Basic data in the material master

It always has to be typed by hand

Q4. Which step brings the GR/IR clearing account back to zero?

Goods receipt 101

Invoice verification MIRO

Payment F-53

Q5. What is the core difference between movement type 501 and 101?

501 has no purchase order reference and posts to a consumption account

501 does not increase stock

501 always requires an invoice

Q6. Does a 311 transfer between storage locations create an accounting document?

Yes, one debit and one credit line

No, only a material document

Only when it crosses plants

Q7. Which movement type issues material to a production order?

261

201

301

Q8. The invoice is 5% higher than the goods receipt value. Which message are you most likely to see?

M8083 price too high (tolerance exceeded)

M7021 vendor not maintained

M8147 valuation class not defined

Q9. A variance invoice is posted and flagged as blocked. Which transaction releases it?

MRBR

MR8M

MIR4

Q10. A credit balance on GR/IR means what?

Received but not invoiced (an accrual liability)

Invoiced but not received (a prepayment)

The books are wrong

Q11. MRP net requirement: 400 + 20 – 300 = ?

120

420

80

Q12. What does an MRP run create?

- Purchase requisitions (which must be converted to orders)
- Purchase orders directly
- Production orders

Q13. The material master is missing the Purchasing view. What is the most likely symptom?

- The material cannot be selected in a purchase order
- The goods receipt will not post
- The invoice cannot be entered

Q14. The purchasing organization level is missing in BP. What does PO creation report?

- Vendor not maintained in purchasing organization 1710
- Material not maintained in plant
- No net price could be determined

Q15. Which transaction shows fastest how far an order has got?

- Purchase order history in ME23N
- MM03
- MB5S

Q16. An invoiced order has to be returned. What is the correct sequence?

MR8M to reverse the invoice → 122 to return the goods

122 to return the goods directly

102 first, then 122

Q17. In the command field, what does the /n in /nMM03 mean?

End the current transaction, then start a new one

Open a new window

Log off

Q18. For a standard-price material (S), where does the difference between receipt value and order price go?

Price variance account (PRD)

GR/IR clearing

Payables

Q19. Which configuration controls a closed GL posting period?

OB52

MMPV

OMR6

Q20. Which transaction lists vendor open items?

FBL1N

FB03

MB51

Q21. For automatic PO creation in a 101 receipt without a PO, which of these is NOT a prerequisite?

The material master has an MRP view

Automatic purchase order is ticked on the movement type

Automatic purchasing is ticked on both the material and the vendor

Q22. MIRO shows no items after you reference the purchase order. What do you check first?

Whether the PO uses GR-based IV and nothing has been received yet

The vendor reconciliation account

Whether the tax code is correct

Q23. An invoice of 217,200.00 arrives for 216,000.00, a difference of 1,200 (0.56 %) inside the PP tolerance of 1 %. What happens?

It posts, with the difference on the price variance account

M8083 is reported and posting is impossible

The order net price is changed automatically

Q24. With IR before GR, what is the GR/IR balance before the goods are received?

Debit (invoiced, not received)

Credit (received, not invoiced)

Zero

How to use the self-test

Answer first, then read the explanation; for any question you get wrong, go back to the table in the matching chapter. Of the 24 questions the first 10 test the process, the next 10 test configuration and troubleshooting, and the last 4 test goods receipt without PO and invoice variances.
