The questions follow SAP MM's knowledge structure: 10 domains plus one cross-chapter consolidated paper, 126 questions in total. Four options each, exactly one correct; every answer is scored immediately, with the explanation and the reasoning behind it. Get a question wrong and the fastest fix is to go back to that chapter and re-read the table.

How to use this test

- **Work domain by domain**: 8 to 12 questions per domain, then read the explanations; two or more wrong and you should re-read that chapter's key points.
- **Then take the consolidated paper**: those are scenario questions, testing where you look first rather than definitions.
- **Check the total last**: the progress bar (right/top) is the site-wide running accuracy and resets on refresh (nothing is written to localStorage).
- **Do not memorise answers**: the same fact is asked in different ways across questions (GR/IR, for instance, appears both as a journal entry and as a balance question).

Domain	Coverage	Questions	Chapter
A	Organisational structure: company code · plant · purchasing organization	10	Business basics · organisational structure
B	Material master: types · views · tables	12	Master data hands-on · MM01/MM03
C	Vendor master and purchasing info records	10	Master data hands-on · BP/ME11
D	Purchasing documents and process: requisition → order → framework agreement	12	Procure to pay in five steps
E	Goods receipt · stock movements · physical inventory	12	Advanced operations · stock movements
F	Invoice verification and GR/IR	12	GR and IR
G	Valuation and automatic account determination (OBYC)	10	Business basics · automatic account determination
H	MRP and requirements planning	10	Advanced operations · MRP
I	Special procurement: consignment · subcontracting · transfers · framework agreements	8	Advanced operations · special procurement
J	Reports · transaction codes · authorisations and periods	10	Quick reference · transaction codes and periods
K	Consolidated mock exam (cross-chapter)	20	All chapters

A. Organisational structure: company code · plant · purchasing organization (10 questions)

- Company code = the legal entity that reports externally; plant = where goods are received, stocked, planned and valuated; the storage location is only a position inside the plant.
- The purchasing organization negotiates conditions with vendors; a plant can be served by several purchasing organizations but only one is flagged as the standard purchasing organization.
- A plant belongs to exactly one company code; a purchasing organization can serve several plants across company codes.

Q1. What is the most important role of the company code (BUKRS) in MM?

- □ It decides in which plant a material is valuated
- □ It decides the accounting standards, the posting periods and the external financial statements
- □ It decides which buyer is responsible
- □ It decides how many storage locations exist

Q2. At which level is the stock quantity managed?

- □ Company code
- □ Purchasing organization
- □ Plant (+ storage location)
- □ Client

Q3. What is the purchasing organization responsible for?

- □ Managing stock quantities
- □ Negotiating purchasing conditions with vendors and creating purchasing documents
- □ Issuing financial statements
- □ Deciding the valuation price of the material

Q4. How does the purchasing group (EKGRP) differ from the purchasing organization?

- □ The purchasing group takes part in accounting postings
- □ The purchasing group is the individual buyer or team; it does not enter accounting and is used for responsibility and statistics
- □ The purchasing group is the purchasing organization
- □ The purchasing group decides the company code

Q5. Can a plant be assigned to more than one purchasing organization?

- □ No, only one
- □ Yes, but one of them must be flagged as the standard purchasing organization to act as the default
- □ Only purchasing organizations of the same company code
- □ The material type decides

Q6. What does the valuation level decide?

- □ The number of storage locations
- □ Whether a material is valuated at plant level or at company code level
- □ The number of purchasing organizations
- □ The authorisations of the purchasing group

Q7. Can a plant belong to two company codes?

- □ Yes
- □ No, a plant belongs to exactly one company code
- □ Only for cross-company purchasing
- □ The purchasing organization decides

Q8. What is the relationship between purchasing organization and company code?

- □ One-to-one
- □ Many-to-many: one purchasing organization can serve several company codes and one company code can have several purchasing organizations
- □ Only usable inside the same company code
- □ The plant decides

Q9. Does the storage location (LGORT) affect the purchase price?

- □ Yes, the price is tied to the storage location
- □ No, the storage location only distinguishes positions inside the plant
- □ Only for consignment
- □ The valuation class decides

Q10. Where does the MRP run take place?

- □ Company code level
- □ Plant level
- □ Purchasing organization level
- □ Client level

B. Material master: types · views · tables (12 questions)

- The material type (ROH/FERT/HALB…) controls which views are available, the number range, whether valuation is mandatory and the field status.
- MARA general data, MARC plant data, MARD storage location stock, MBEW valuation data; MARC and MARD are both keyed by plant.
- The base unit of measure is used for stock management, the order unit for purchasing; the two may differ and the system converts between them.

Q1. Which of the following is NOT decided by the material type?

- □ Which views are available
- □ The number range (internal/external)
- □ Whether valuation by amount is mandatory
- □ The reconciliation account of the vendor

Q2. What do ROH / HALB / FERT stand for?

- □ Raw material / semi-finished product / finished product
- □ Finished product / raw material / semi-finished product
- □ Trading good / raw material / service
- □ Semi-finished product / finished product / raw material

Q3. Which table holds the material's general data (description, base unit, material group)?

- □ MARC
- □ MARA
- □ MARD
- □ MBEW

Q4. Which table holds the plant-level MRP type and purchasing group?

- □ MARA
- □ MARC
- □ MARD
- □ MBEW

Q5. In which table is the unrestricted stock of one storage location recorded?

- □ MARC
- □ MARD
- □ MCHB
- □ MSKA

Q6. Which table holds the standard price, the moving average price and the valuation class?

- □ MBEW
- □ MARA
- □ MARC
- □ MARD

Q7. The material is missing the Purchasing view. What is the most direct consequence?

- □ The goods receipt cannot be posted
- □ The material cannot be selected in the purchase order / the purchasing data cannot be determined
- □ It cannot be invoiced
- □ MRP cannot run

Q8. The material has no Accounting view (it is not valuated). Which error is most likely?

- □ The purchase order cannot be saved
- □ Account determination fails at goods receipt or the receipt cannot be valuated
- □ The purchase requisition cannot be created
- □ The PO cannot be printed

Q9. How do the base unit of measure and the order unit relate?

- □ They must be identical
- □ They may differ; the system converts using the material's units of measure
- □ The order unit takes precedence
- □ The vendor decides

Q10. What is the difference between price control S and V?

- □ S is moving average price and V is standard price
- □ S is standard price (differences go to a price difference account), V is moving average price (recalculated on every receipt)
- □ The two are equivalent
- □ S is only used for finished products

Q11. What is the difference between the deletion flag and deletion in the material master?

- □ There is none
- □ The deletion flag only blocks usage while the data remains; real deletion needs an archiving program
- □ The deletion flag physically deletes the data
- □ The deletion flag only affects reporting

Q12. The material group (MATKL) is closest to which role?

- □ It decides the stock quantity
- □ An additional dimension for purchasing statistics and account determination
- □ It decides the plant
- □ It decides the vendor

C. Vendor master and purchasing info records (10 questions)

- In S/4HANA vendors are business partners: role FLVN00 (FI) + FLVN01 (MM), with the data spread over three levels: address / company code / purchasing organization.
- The reconciliation account (for example 160000) sits at company code level; a wrong entry surfaces as failed account determination at invoice posting.
- A purchasing info record = vendor + material + purchasing organization; the PO takes its net price from there first.

Q1. Which transaction / object is used to maintain a vendor in S/4HANA?

- □ XK01
- □ BP (business partner)
- □ MM01
- □ VD01

Q2. What does BP role FLVN01 stand for?

- □ Financial vendor
- □ Purchasing (MM) vendor
- □ Customer
- □ Contact person

Q3. The vendor's "three levels of data" usually means?

- □ Address / company code / purchasing organization
- □ Basic / purchasing / accounting
- □ General ledger / payables / assets
- □ Purchasing / inventory / invoicing

Q4. A wrong reconciliation account on the vendor first shows up where?

- □ Creating the purchase requisition
- □ Creating the purchase order
- □ Posting the invoice (account determination)
- □ Posting the goods receipt

Q5. What is the key of a purchasing info record?

- □ Vendor + material + plant
- □ Vendor + material + purchasing organization
- □ Material + plant
- □ Vendor + purchasing group

Q6. When you create a PO, which source has top priority for the proposed net price?

- □ The material standard price
- □ The purchasing info record
- □ The previous purchase order
- □ Manual entry

Q7. A PO reports "No net price could be determined". What is the most likely cause?

- □ The vendor is blocked
- □ The purchasing info record is missing or its price is empty
- □ The material lacks the MRP view
- □ No purchasing organization assigned to the plant

Q8. Where can "GR-based IV" be changed?

- □ MM02
- □ ME12 (info record) or ME22N (order item)
- □ MIRO
- □ OBYC

Q9. What is the purpose of the source list?

- □ Recording stock quantities
- □ Restricting which vendors a material in a plant may be procured from
- □ Deciding the price
- □ Deciding the accounts

Q10. A vendor is blocked for purchasing. What is the most direct effect?

- □ Existing orders can no longer be received
- □ No new purchase orders can be created
- □ Payment is blocked
- □ The stock is blocked

D. Purchasing documents and process: requisition → order → framework agreement (12 questions)

- A purchase requisition is internal demand and creates no accounting document; a purchase order is a commitment to the vendor and moves neither stock nor the books.
- Convert requisitions with ME21N/ME57; order type NB standard, FO framework, UB stock transport.
- Contracts and scheduling agreements are long-term agreements; RFQ, quotation and comparison are the ME41/ME47/ME49 set.

Q1. What is the essential difference between a purchase requisition and a purchase order?

- □ A requisition needs no approval
- □ A requisition is internal demand, an order is a commitment to the vendor
- □ A requisition moves stock
- □ An order cannot reference a requisition

Q2. After saving a purchase order, what has changed in stock and in the books?

- □ Stock has increased
- □ A GR/IR accrual has been raised
- □ Nothing yet — the books move at goods receipt
- □ Payables have been created directly

Q3. Which transaction is most used to convert a requisition into an order?

- □ ME51N
- □ ME21N (or ME57 for mass processing)
- □ ME11
- □ MIGO

Q4. What do order types NB / FO / UB stand for?

- □ Standard purchase order / framework order / stock transport order
- □ Standard / returns / consignment
- □ Domestic / foreign / import
- □ Service / material / asset

Q5. Where is the release strategy on a purchase order used?

- □ Controlling who may see the stock
- □ Multi-level approval by amount or department before the order may be sent
- □ Deciding the vendor
- □ Deciding the price

Q6. How does a contract differ from a scheduling agreement?

- □ A contract has a total quantity or value and call-off orders are placed as needed; a scheduling agreement holds a delivery schedule over time
- □ They are identical
- □ A contract cannot be used to create a PO
- □ A scheduling agreement creates no document

Q7. Which transaction codes cover RFQ, quotation and price comparison?

- □ ME41 / ME47 / ME49
- □ ME51N / ME21N / ME31K
- □ MM01 / MM02 / MM03
- □ MIGO / MIRO / MRBR

Q8. How is the "still to be delivered" quantity on a purchase order calculated?

- □ Ordered quantity – invoiced quantity
- □ Ordered quantity – quantity received
- □ Stock + ordered
- □ Entered manually

Q9. In ME23N, which tab shows most directly where the order stands?

- □ Item detail
- □ Purchase order history
- □ Conditions
- □ Account assignment

Q10. Number ranges for purchasing documents are usually assigned by?

- □ Material type
- □ Document type (order type)
- □ Plant
- □ Vendor

Q11. Can a purchase order reference a contract directly instead of a requisition?

- □ No
- □ Yes — a call-off order against a contract is standard practice
- □ Only requisitions can be referenced
- □ A requisition must be created first

Q12. In a returns scenario, how does a returns order differ from a normal order?

- □ It creates no document
- □ The direction is reversed and the return is received with 122
- □ It cannot be invoiced
- □ It needs no vendor

E. Goods receipt · stock movements · physical inventory (12 questions)

- 101 receipt against an order, 122 return to vendor, 102 reversal of a receipt, 311 storage location transfer (same value, no accounting document), 301 plant-to-plant transfer (may create an accounting document).
- 261 issue to production, 201 issue to a cost centre, 501 goods receipt without a purchase order, 561 initial stock load.
- A stock change always comes with a material document; when value is involved an accounting document is created as well.

Q1. What does movement type 101 mean in business terms?

- □ Return to vendor
- □ Goods receipt against a purchase order
- □ Storage location transfer
- □ Issue to production

Q2. Which movement type sends received goods back to the vendor?

- □ 102
- □ 122
- □ 261
- □ 311

Q3. How do 102 and 122 differ?

- □ 102 reverses a receipt (the original document), 122 is a returns delivery (a business return)
- □ They are identical
- □ 102 is used for returns
- □ 122 creates no document

Q4. Which movement type transfers stock between storage locations (0001 → 0002)?

- □ 101
- □ 301
- □ 311
- □ 261

Q5. Which stock movement normally creates no accounting document?

- □ 101 goods receipt
- □ 261 issue
- □ 311 storage location transfer
- □ 501 goods receipt without PO

Q6. Which movement type issues components to a production order?

- □ 201
- □ 261
- □ 301
- □ 501

Q7. Which movement type issues to a cost centre (not a production order)?

- □ 201
- □ 261
- □ 311
- □ 101

Q8. What is the core difference between 501 and 101?

- □ 501 does not reference a purchase order and usually goes straight to consumption or expense
- □ 501 does not increase stock
- □ 501 always requires an invoice
- □ 501 is only used for opening balances

Q9. What is the correct use of 561?

- □ Everyday goods receipt
- □ Loading opening stock and assets at go-live
- □ Returns
- □ Transfers

Q10. What does posting a physical inventory difference (MI07) produce?

- □ Only a change in the stock quantity
- □ A material document plus an accounting document (the difference goes to the inventory difference account)
- □ An accounting document only
- □ No document

Q11. Which documents does a single 101 receipt normally create?

- □ Only a material document
- □ A material document plus an accounting document (stock Dr / GR/IR Cr)
- □ Only an accounting document
- □ A purchase order and an invoice

Q12. What is the default behaviour when the receipt quantity exceeds the order quantity?

- □ It is rejected outright
- □ Allowed within the receipt tolerance, error beyond it
- □ The order quantity is changed automatically
- □ An invoice is created automatically

F. Invoice verification and GR/IR (12 questions)

- Three-way match: purchase order (what we owe), goods receipt (what arrived), invoice (what is being charged).
- Tolerance keys in OMR6: BD small differences, DQ quantity deviation, PP price change, VP moving average price difference.
- An invoice beyond tolerance can still be posted but payment is blocked; release it with MRBR. The only exits from GR/IR are an invoice or MR11.

Q1. What does invoice verification (MIRO) do?

- □ Pays the vendor
- □ Posts after matching order / receipt / invoice
- □ Changes the order price
- □ Prints the invoice

Q2. When is the GR/IR accrual account cleared?

- □ At goods receipt
- □ When the invoice verification is posted
- □ At payment
- □ At month-end

Q3. What does tolerance key BD in OMR6 mean?

- □ Quantity deviation
- □ Price change
- □ Form small differences (rounding)
- □ Moving average price difference

Q4. The invoice amount is 5% above the order net price. What is the most likely handling?

- □ Posted without any message
- □ Message M8083 and/or payment blocked after posting, release with MRBR
- □ The order is changed automatically
- □ An automatic credit memo

Q5. Which transaction releases a blocked invoice?

- □ MIR4
- □ MRBR
- □ MR8M
- □ MIR7

Q6. How does a parked invoice (MIR7) differ from MIRO?

- □ A parked invoice creates no accounting document and can be edited as often as you like
- □ They are identical
- □ A parked invoice is paid immediately
- □ A parked invoice cannot reference a PO

Q7. Which transaction reverses a posted invoice?

- □ MR8M
- □ MRBR
- □ MIRO with a second invoice
- □ FB03

Q8. A credit balance in GR/IR usually means?

- □ Goods arrived, invoice not yet received (accrued liability)
- □ Invoice arrived, goods not yet received
- □ The books are wrong
- □ The vendor overpaid

Q9. What do invoice document types RE and RN stand for?

- □ Invoice (gross) / credit memo
- □ Returns / goods receipt
- □ Prepayment / final invoice
- □ Domestic / foreign

Q10. With "GR-based IV" unticked, you may?

- □ Only invoice after receiving the goods
- □ Post the invoice before the goods arrive (invoice first, goods later)
- □ Not invoice at all
- □ Only create credit memos

Q11. What is a subsequent debit used for?

- □ Refunding money that was overpaid
- □ Charging an amount that was under-invoiced (freight, a price increase)
- □ Reversing an invoice
- □ Prepaying goods

Q12. One invoice covers both a delivery and a return. What is the correct approach?

- □ Split it into two invoices
- □ Set the individual items to debit or credit direction inside MIRO
- □ Enter the net amount only
- □ Use MR8M

G. Valuation and automatic account determination (OBYC) (10 questions)

- Standard price (S): the price is fixed and differences go to a price difference account; moving average price (V): the unit price is recalculated on every receipt.
- Automatic account determination finds the account by transaction key + valuation class (+ valuation grouping code): BSX stock, WRX GR/IR, PRD price difference, GBB goods issue and consumption.
- The valuation class comes from the material's accounting view and selects the account group; the valuation grouping code groups plants.

Q1. With price control S, where does the difference between the receipt price and the standard price go?

- □ GR/IR
- □ Price difference account (PRD)
- □ Payables
- □ Stock

Q2. With price control V, invoice differences usually?

- □ Go to the price difference account
- □ Adjust the stock value directly (and therefore the cost of later issues)
- □ Are posted to GR/IR
- □ Are not allowed

Q3. Which account does transaction key WRX point to?

- □ Stock account
- □ GR/IR clearing account
- □ Price difference
- □ Consumption account

Q4. What does transaction key BSX determine?

- □ The GR/IR account
- □ The stock account (per valuation class)
- □ Payables
- □ Tax

Q5. A goods receipt reports "Account determination failed". What is the most likely cause?

- □ The vendor is blocked
- □ The valuation class is missing or OBYC has no account for that transaction key
- □ The material lacks the MRP view
- □ The period is not open

Q6. Where is the valuation class (BKLAS) maintained?

- □ Material master accounting view (plant / company code level)
- □ Vendor master
- □ Purchasing organization customising
- □ MRP parameters

Q7. What does the valuation grouping code (KALK in OBYC) mainly solve?

- □ Using different accounts for the same valuation class in different plants
- □ Deciding the vendor
- □ Deciding the currency
- □ Deciding the tax rate

Q8. Why is a standard price a poor fit for raw materials whose price moves often?

- □ A standard price does not allow goods receipt
- □ Differences pile up in the price difference account and the stock value does not follow the market
- □ A standard price cannot be invoiced
- □ A standard price cannot run MRP

Q9. OBYC configuration belongs to which kind of work?

- □ Daily end-user operation
- □ Customising (consultant / key user); one change affects the whole company
- □ Monthly closing
- □ Vendor maintenance

Q10. Can one material use S in plant A and V in plant B?

- □ No, price control is client-level
- □ Yes — price control is maintained per valuation area (usually the plant)
- □ Only company-wide
- □ The material type decides

H. MRP and requirements planning (10 questions)

- Net requirement = demand + safety stock − available stock − already ordered (in transit).
- MRP type PD plans by demand, ND takes no part, VB is manual reorder point; lot size EX exact, FX fixed, HB replenish up to the maximum.
- An MRP run creates purchase requisitions (external) or planned orders (in-house); MD04 shows the document chain.

Q1. What is the basic net requirement formula?

- □ Demand + safety stock – available stock – already ordered
- □ Demand – safety stock
- □ Stock + demand
- □ Already ordered – stock

Q2. How do MRP types PD and ND differ?

- □ PD plans by demand, ND takes no part in MRP
- □ PD is the reorder point type
- □ ND is more exact
- □ The two are equivalent

Q3. What do lot-sizing procedures EX / FX / HB mean?

- □ Exact to the net requirement / fixed order quantity / replenish up to the maximum
- □ Fixed / exact / minimum
- □ Economic lot / rounding / splitting
- □ Day / week / month

Q4. After an MRP run, externally procured materials usually produce?

- □ Purchase orders
- □ Purchase requisitions (to be converted)
- □ Production orders
- □ Delivery notes

Q5. What can you see in MD04?

- □ Only the stock
- □ Requirements, stock, open orders, net requirements and the document chain
- □ Only purchase orders
- □ Only invoices

Q6. What is safety stock for?

- □ Replacing MRP
- □ A buffer against demand and lead-time variation; falling below it triggers replenishment
- □ Deciding the price
- □ Deciding the accounts

Q7. What does the planning time fence control?

- □ Which dates are no longer changed automatically
- □ Price changes
- □ Vendor selection
- □ Storage locations

Q8. What is an MRP area used for?

- □ Planning stock and requirements separately by storage location or sub-plant
- □ Deciding the company code
- □ Deciding the currency
- □ Deciding the tax rate

Q9. What typically distinguishes strategy group 10 from 40?

- □ 10 is make-to-stock, 40 is make-to-order
- □ 10 creates no requirement
- □ 40 takes no part in MRP
- □ The two are the same

Q10. In an MRP run, what does "already ordered" mean?

- □ The invoiced quantity
- □ The quantity on purchase orders not yet received (in transit)
- □ The amount paid
- □ The scrapped quantity

I. Special procurement: consignment · subcontracting · transfers · framework agreements (8 questions)

- Consignment: the goods sit in your plant but belong to the vendor; settlement only happens on withdrawal (movement types in the 411 K family).
- Subcontracting: you send components to the vendor and the components are backflushed from the BOM at goods receipt.
- Transfers: the stock transport order (UB) is for cross-plant moves; framework agreements come as contract and scheduling agreement.

Q1. What characterises consignment stock?

- □ The goods sit at the vendor's site
- □ The goods sit in your plant but belong to the vendor; settlement only on withdrawal
- □ Prepayment is mandatory
- □ It is outside inventory management

Q2. What does the system do with the components at a subcontracting goods receipt?

- □ Replenishes them automatically
- □ Backflushes (consumes) them according to the BOM
- □ Moves them to quality inspection
- □ Returns them to the vendor

Q3. What is a statistical material normally used for?

- □ Managing stock value
- □ Statistics and reporting only, with no stock or value impact (pipeline material, for example)
- □ Production planning
- □ Vendor evaluation

Q4. How does a stock transport order (UB) differ from a transfer posting (301)?

- □ UB is a purchasing document and can carry a delivery schedule and a vendor; 301 is a direct posting
- □ They are identical
- □ UB creates no document
- □ 301 needs a vendor

Q5. Which two main forms of framework agreement exist?

- □ Contract and scheduling agreement
- □ Requisition and order
- □ RFQ and quotation
- □ Goods receipt and invoice

Q6. How does batch management differ from serial number management?

- □ A batch covers a quantity of goods, a serial number a single piece
- □ They are identical
- □ Serial numbers are only for finished products
- □ Batches cannot be used for raw materials

Q7. What characterises third-party procurement?

- □ The vendor ships directly to the customer; you only handle documents and settlement
- □ You must receive the goods yourself
- □ No invoice is created
- □ Only consignment is possible

Q8. Which movement types are normally used to withdraw consignment stock?

- □ 101/102
- □ The 411/431 family (K indicator)
- □ 261/201
- □ 311/301

J. Reports · transaction codes · authorisations and periods (10 questions)

- Documents with MB51, stock with MB52/MMBE, GR/IR with MB5S, material list with MM60, purchase orders with ME2L/ME2M.
- For authorisation errors use SU53 to see the missing object; personal defaults are SU3 (LANG/WRK/BUKRS).
- Periods: accounting period OB52, material period MMRV/MMPV; both must be open before you can receive.

Q1. Which transaction lists material documents by selection criteria?

- □ MB51
- □ MB52
- □ ME2L
- □ MM60

Q2. What is the easiest way to see a material's stock in each storage location?

- □ MMBE (single material) or MB52 (mass)
- □ MM60
- □ MB51
- □ ME23N

Q3. Which transaction reconciles the GR/IR balance at month-end?

- □ MB5S
- □ MB51
- □ FBL3N
- □ ME2M

Q4. Which transaction summarises purchase orders by material?

- □ ME2M
- □ ME2L (by vendor)
- □ ME21N
- □ MB52

Q5. To list all materials of one material type, use?

- □ MM60
- □ MM03
- □ MB51
- □ ME11

Q6. What is the easiest transaction for looking directly at MARA/MARC data?

- □ SE16N
- □ SM30
- □ SU01
- □ ST05

Q7. You get "You are not authorised to execute transaction X". What do you check first?

- □ SU53 (or ST01) for the missing authorisation object
- □ Restart the client
- □ Call the vendor
- □ Change the material type

Q8. What does SU3 do?

- □ Maintains your own default values (language / plant / company code)
- □ Creates users
- □ Assigns roles
- □ Changes the system configuration

Q9. A month-end goods receipt reports "Posting period is not open". What do you check?

- □ OB52 (accounting period) and MMRV/MMPV (material period)
- □ OMR6
- □ OBYC
- □ MM01

Q10. What is the proper way to find out what triggers a status bar message and how to handle it?

- □ Search the message number (Help → Application Help / transaction SE91)
- □ Retry repeatedly
- □ Change the material master
- □ Call the vendor

K. Consolidated mock exam (20 questions)

The questions below are no longer grouped by chapter; all of them are the "what would you do on the spot" kind: where do you look first when the error appears, which two lines moved in the books, does this step create a document.

Q1. You created a material but cannot select it in a purchase order. Which view is most likely missing?

- □ Basic data 1
- □ Purchasing
- □ MRP 1
- □ Accounting 1

Q2. Goods receipt says "Material is not maintained in plant 1710". What does that mean?

- □ The material is blocked
- □ Only general data was created, no plant view
- □ The vendor is missing
- □ The period is not open

Q3. After receiving 300 PC against order 4500000123, an invoice for 300 PC arrives. What is the GR/IR balance now?

- □ 216,000 credit
- □ 0
- □ 216,000 debit
- □ It depends on the tolerance

Q4. The invoice amount is 0.5% above the receipt and sits inside the default tolerance. What is the result?

- □ Error, it cannot be posted
- □ Posted successfully, the difference goes to the small difference / price difference account
- □ The order price is changed automatically
- □ An automatic return

Q5. The purchase order is fully invoiced and you need one more invoice. What should you do?

- □ Just post it, the system allows it
- □ Reverse the original invoice with MR8M, then post again
- □ Change the order quantity
- □ Force the posting in MIRO

Q6. You want to turn "receive first, invoice later" into "invoice first, receive later". What do you change?

- □ OMR6
- □ The info record (ME12) or the GR-based IV indicator on the PO item
- □ OBYC
- □ MM02

Q7. Which of these is NOT needed for a goods receipt without PO to create the order automatically?

- □ The automatic PO indicator on movement type 101
- □ The automatic PO indicator in the material master
- □ The automatic PO indicator in the vendor master
- □ A purchase requisition must exist first

Q8. What is the accounting effect of a standard storage location transfer (311)?

- □ The stock value changes
- □ No accounting document, only a material document
- □ GR/IR is created
- □ Payables are created

Q9. What is the usual journal entry for a production issue (261)?

- □ Stock Dr / GR/IR Cr
- □ Production cost Dr / stock Cr
- □ GR/IR Dr / payables Cr
- □ Bank Dr / payables Cr

Q10. A standard price material is received above the standard price. Where does the difference go?

- □ GR/IR
- □ Price difference (PRD)
- □ Payables
- □ Tax

Q11. Which of the following is not a purchasing document?

- □ Purchase requisition
- □ Purchase order
- □ Contract
- □ Material document

Q12. The purchase requisition created by an MRP run carries which number range?

- □ The purchase order number range
- □ The purchase requisition number range
- □ The material document number range
- □ The invoice number range

Q13. Safety stock rises from 20 to 120 with everything else unchanged. What happens to the MRP net requirement?

- □ Falls by 100
- □ Rises by 100
- □ Unchanged
- □ Cannot be determined

Q14. The vendor has no data for purchasing organization 1710. What appears when you create a PO?

- □ Material not maintained
- □ Vendor is not maintained in purchasing organization 1710
- □ Period not open
- □ Account determination failed

Q15. Which transaction shows the change history of a material?

- □ MM04
- □ MM03
- □ MM60
- □ MB51

Q16. An invoice is blocked. What are you most likely to see when paying?

- □ The payment goes through
- □ A message that a blocked invoice exists and an MRBR release is needed
- □ Automatic release
- □ The invoice is deleted

Q17. At month-end GR/IR still shows a credit balance. What does that mean?

- □ Goods arrived, invoice missing — chase the invoice or accrue
- □ Invoice arrived, goods missing
- □ The account is wrong
- □ The vendor overpaid

Q18. To restrict a buyer to orders of their own purchasing group, what do you use?

- □ The material type
- □ Authorisation roles (authorisation objects by purchasing group)
- □ The MRP type
- □ The price control

Q19. Which of these affects both the stock quantity and the accounting value?

- □ 311 storage location transfer
- □ 101 goods receipt against a purchase order
- □ Saving a purchase order
- □ Changing the material master

Q20. The same material uses standard price in plant 1710 and moving average price in plant 1720. Is that possible?

- □ Not possible
- □ Yes — price control is maintained per valuation area
- □ Only company-wide
- □ It requires a different material type

How scoring works

Only the first click on each question counts, and a wrong choice still shows the correct answer with its explanation (good for learning, not for a closed-book exam). For a closed-book run, zoom the browser out below 100% and do it once, then come back to the explanations; or print the page (A4 portrait) and use it as a paper test.
